REAL TIME QUALITATIVE RT-PCR DETECTION OF 2019-NCOV RNA / COVID-19 RNA

Test	Result
Specimen	Nasopharyngeal & Oropharyngeal swab
Target	SARS CoV-2 RNA
Result	Detected (POSITIVE)
Ct Value	28

CT VALUE LESS THAN 35 IS CONSIDERED TO BE POSITIVE.

ICMR Registration No.

999565874

Method: RT-PCR

Note:

- > The result relates only to the specimen collected/received in the lab.
- > All the positive cases will be notified to /MCGM/ State Govt/ICMR for further surveillance.
- > Positive results are indicative of the presence of SARS-CoV-2 RNA.
- > ICMR recommended kits used.
- > ICMR does not recommend use of Ct value for determining infectiousness of COVID-19 patients and deciding patient management protocols. The Ct value should solely be used at the risk of the treating physician or patient. The laboratory will not be responsible for any untoward outcome due to the use of Ct values in patient treatment protocol.

Limitations:

- > In case of negative result with a strong clinical history, a repeat sample may be considered.
- > Negative results do not preclude SARS - CoV - 2 infection and should not be used as the sole basis for patient management decisions.
- > The test may become negative within a few days of testing (especially high Ct values) or may even persist to remain positive for upto 42 days.
- > A repeat/ follow-up test is not recommended as per guidelines issued by ICMR (Version VI, dated 4th Sept 20).

Additional guidance available on ICMR and WHO website/documents pertaining to COVID 19
